ROOMCAST is a brand new system that substantially improves and simplifies communication between residents and management. It provides residents with a simple panel of buttons which send just the right information to just the right place or person. It is the product of two years of university-led research and over ten years of experience with residential communities.

ROOMCAST for RESIDENTS

A beautifully **simple interface** that runs on any device. Individual residents are presented with only the buttons relevant to the services that they need.

Buttons completely **eliminate the frustrations** that come from figuring out who needs to be talked to, what information they need and what the process is.

Instant feedback and tracking on all button presses. **ROOMCAST** can provide up to date information on the status of a button press and how long it will typically take to resolve.

ROOMCAST for MANAGEMENT

ROOMCAST can use **any communication channel**. A button can send a text to security, an email to the building manager, popup a message on a dashboard and even send out messages to specific residents or owners.

ROOMCAST is **simple to use**. With a small set of screens, management can track button presses, create new buttons and analyse statistics on a development.

ROOMCAST is **powerful**. It has been designed to **work with other systems**. When a button is pressed it might interrogate a user's account, read sensors, send messages to neighbours, unlock a door, send a tweet, read the temperature of the pool, book a seat in the cinema or any other action we've not yet thought of!

ROOMCAST can earn. The button panel is yours to use as you see fit. Buttons can be added that call out to affiliated local businesses: florists, takeaways, estate agents, gyms etc.
